Training Day 7 Report

CSS Menus: -

In this code I have, created menu with five elements: -

- Menu-1
- Menu-2
- Menu-3
- Menu-4
- Menu-4

Using unordered list tag oh HTML and list have been styled using Internal CSS, to look more attractive.

Menu-1 contains further submenu with five menu option: -

- Menu-1.1
- Menu-1.2
- Menu-1.3
- Menu-1.4
- Menu-1.5

This has also been created using Unordered list and styled with CSS.

The Menus options written within anchor tag, so that on clicking any of the menu option, it will direct to it's respected given hyperlink.

Menus are generally used in almost all the websites to provide user with available option, form which they can choose option of their choice.

These are generally given at Header of website or left-most side of website.

Output

| Menu-1 | Menu-2 | Menu-3 | Menu-4 | Menu-5 |

When we hover on any of the menu, it's background will be changed to blue, it has been done using CSS **hover property** and if it is containing any submenu, it will be visible.

Menu-1	Menu-2	Menu-3	Menu-4	Menu-5
Menu-1.1				
Menu-1.2				
Menu-1.3				
Menu-1.4				
Menu-1.5
